

# REAR LOAD CONTAINERS

## STEEL REAR LOAD CONTAINERS

EIS's Rear Load Containers are built to take what your customers throw at them. Our containers are engineered using heavy gauge steel to withstand the stress of daily use. Standard models feature 12 gauge sides and 10 gauge bottoms, high density polyethylene lids and fully welded in-seams. Our heavy duty models have 10 gauge sides and 7 gauge bottoms for additional strength and durability. Containers are primed inside and out to reduce corrosion. We use first grade materials and ensure our standard line of containers provides all the options today's haulers demand.

Multiple Rear Load Container options are available! We can customize any container to meet your needs. Talk to a Sales Rep to see which solution will solve your problem.

### CONSTRUCTION:

- Angled bumper pads help prevent damage to the front of the container
- Floor channels are capped at both ends to prevent debris from getting inside and prevent fluids from draining onto truck.
- Floor channel gussets extend up the front and back walls to create extra support
- Top edges are rounded and smooth for safety during customer loading
- Welded tube lid frame provides added strength
- Primed inside and out to reduce corrosion
- Painted in one of many available industrial enamel colors
- Nestable 2, 3 & 4 yard containers reduce shipping costs and required storage space

### FEATURES:

- Solid Trunnion Bars
- Reinforced front corners
- Swing away lid frames

### LIDS:

- Single wall, double lip lids ensure durability
- Optional lids upon request
